

WHEN BOTH YOUR HORSES HAVE AGED,  
**CHANGE BOTH IN 'ONE GO'**  
TO GIVE YOUR CARRIAGE A NEW LIFE!

If your arthritic knee joints are two tired horses pulling a carriage, changing only 'one-at-a-time' will not help - the remaining tired horse will continue to slow down the carriage!

*Simultaneous*  
**Bilateral Total Knee Replacement**  
(A SOUND TECHNICAL & FINANCIAL DECISION)

## What is Bilateral **Simultaneous** Total Knee Replacement?

- It is replacing both Knee Joints in a single surgery, under the same anesthesia.

## Why go for a Bilateral **Simultaneous** Total Knee Replacement?

- 70% of Osteoarthritis & almost 100% Rheumatoid arthritis of the limb joints require a Bilateral surgery to restore good functioning.
- You can opt for 'One-after-the-other' approach but...

UNEQUAL

EQUAL

You will end up with one limb longer and the implant in that limb stressed more, leading to early wear out.

## Is it safe?

- Absolutely, if you have no major past illness, it can be advised. We have audited our cases of bilateral simultaneous total knee replacement patients, they are doing fabulously.

## Is it more susceptible to infection?

- No. The chances are no different than 'one-after-the-other' as shown in recent 'international literature.'

## What you save?

- Single admission of five days instead of two separate admissions.
- Financial saving of at least 20% - 25% on medications, stay and professional charges.
- Your near and dear ones are less harassed as the surgery is done in a 'One Go' approach.
